

Benefits of Membership

NCPCWA LOOKS OUT FOR YOUR BUSINESS

~NCPCWA maintains a watch in the State Legislature for issues that could affect the Carwash Industry and your business.

EDUCATIONAL AND NETWORKING OPPORTUNITIES

~Educational opportunities through Newsletters, Websites, Roadshows and Meetings to keep you current and help you stay in the best position to be successful.

~Networking opportunities with your peers in the Carwash Industry. A membership directory to help you develop and maintain your network.

PUBLIC RELATIONS

~Educating the general public about the benefits of using professional carwashes—less water consumption than home washing, safer for our environment because there is no discharge of untreated water, etc. Promoting NCPCWA members as important members of their local communities.

~Water Conservation Certification signage showing customers that they are dealing with an environmentally responsible business.

Vehicle Wash Certification Program

The purpose of the NC State Recognized water conservation 'Vehicle Wash Certification Program' is to promote best management practices and recognize year-round conservation efforts. For Public Utilities the incentives are reductions in peak demand and year-round demand, resulting in delayed imposition of drought restrictions system-wide.

This program is responsible for promoting NC Statute G.S. 143-355.2(h1) and is endorsed by NC DENR. This legislation protects Certified Carwashes and is only available to NC Professional Carwash members.

The Vehicle Wash Conservation Certification Program is a voluntary program, in which the wash owner/operator may request certification from and be recognized by the North Carolina Professional Carwash Association with regard to water conservation. The principal incentive to the professional vehicle wash owner is to receive "credit" for proactively conserving water not only during a drought but also throughout the year to allow continued washing during declared drought emergencies. An additional incentive is positive promotional signage, which can be placed at the business, to show participation in the program.

Environmentally Prudent

- After lawn watering, summer car washing produces the second largest demand for peak summer water use.
- Many professional car washes use water reclamation systems to significantly reduce water usage.
- Professional car washes discharge their water into a separate sanitary sewer or treat and recycle it.

The professional carwash industry cleans the world's automobiles in the safest, most convenient, and environmentally responsible manner. With more vehicles on the road and more washes being purchased by motorists than ever before, this industry's best days are still to come. What began with single location businesses in the post World War II era to satisfy Americans' love of the automobile has grown into a complex international industry.
